

Production Coach utilizes a centralized SQL database connecting both office and factory to real-time data. Web applications such as Jobsite Tracking and Time-keeping are synchronized with the Local Area Network environment.

Scan products & kits into a staging area prior to shipping.

3D Visualization automatically displays the assembly with part position & details including machining. Updates product status to "Assembled" & generates a unique product barcode.

Scan product & kits onto the truck to ensure 100% accurate shipments.

Jobsite Tracking allows for scanning products & kits off the delivery truck and or at installation. Report damaged items and capture jobsite images from a single web-interface.

See real-time progress of work orders as they move through the factory.

Automatic sorting of parts by assembly reduces material handling, ensures readiness to assemble & accounts for missing parts.

Import production orders from industry software solutions including woodCAD|CAM, Cabinet Vision, Microvellum, Cut Rite, Excel and more.

Smart labels: sort by groups, like parts or edge banding color. Place labels with proper orientation.

Track parts, products, and projects with barcode, RFID or machine controller feedback.
